

Student Feedback following STEM instruction:

Question item:

How have your views on science and math changed as a result of this class?

~~before this that kind of problem.~~ After having no issues doing the math presented in your class this year, I have to admit my confidence rose a bit. I know I'm still pretty bad and I don't see that changing but I do think that it is at least possible to do math now. Before I just kind of gave up honestly but since I was able to do it in your class, I should be able to do it during math class, right? I think that's how that works.

Seems more real-life rather than non useful stuff

i have learned to look at math differently by not looking at it as just a bunch of numbers

it has become easier in a way, i realized that math and science are on the same boat, you need one or the other to solve problems.

math is more interesting when u know more stuff

What will you remember or take away from this class:

that asking questions is okay

I think everything I can remember. I was playing with my brother and I was teaching him Newton's laws with balloons and stuff and I really liked it.

Always work through things even when it's difficult.
